

Contents

| | | |
|----------|---|------------|
| 1 | Integrable systems | 19 |
| 1.1 | Flows, Lie derivative, inner product and Cartan's formula | 19 |
| 1.2 | Symplectic manifolds and Hamiltonians | 32 |
| 1.3 | Coadjoint orbits and their symplectic structures | 64 |
| 1.4 | Arnold-Liouville theorem and completely integrable systems | 77 |
| 1.4.1 | Arnold-Liouville theorem | 77 |
| 1.4.2 | Completely integrable systems | 85 |
| 1.5 | The problem of the rotation of a solid body about a fixed point | 87 |
| 1.5.1 | The Euler rigid body motion | 90 |
| 1.5.2 | The Lagrange top | 95 |
| 1.5.3 | The Kowalewski top | 96 |
| 1.5.4 | Special cases | 105 |
| 1.6 | The problem of motion of a solid in an ideal fluid | 106 |
| 1.6.1 | Clebsch's case | 107 |
| 1.6.2 | Lyapunov-Steklov's case | 109 |
| 1.7 | Yang-Mills field with gauge group $SU(2)$ | 110 |
| 2 | Spectral methods for solving integrable systems | 115 |
| 2.1 | Lax equations and spectral curves | 115 |
| 2.2 | Completely integrable systems and Kac-Moody Lie algebras | 117 |
| 2.3 | Applications | 122 |
| 2.3.1 | Geodesic flow on $SO(n)$ | 122 |
| 2.3.2 | The Euler rigid body motion | 123 |
| 2.3.3 | The Manakov geodesic flow on the group $SO(4)$ | 124 |
| 2.3.4 | Jacobi geodesic flow on an ellipsoid and Neumann problem | 132 |
| 2.3.5 | The Lagrange top | 134 |

| | | |
|----------|--|------------|
| 2.3.6 | A family of integrable systems | 134 |
| 2.3.7 | The coupled nonlinear Schrödinger equations . . . | 143 |
| 2.3.8 | The Yang-Mills equations | 143 |
| 2.3.9 | The Kowalewski spinning top | 144 |
| 2.3.10 | The Goryachev-Chaplygin top | 146 |
| 2.3.11 | Example of V_{ij} in section 2.2 (theorem 2.4) | 147 |
| 2.4 | The spectrum of Jacobi matrices and difference operators | 147 |
| 2.5 | Griffiths linearization of flows | 156 |
| 2.6 | Applications | 167 |
| 2.6.1 | The Toda lattice | 167 |
| 2.6.2 | The Lagrange top | 172 |
| 2.6.3 | Nahm's equations | 173 |
| 2.6.4 | The n -dimensional rigid body | 175 |
| 3 | Algebraically integrable systems | 177 |
| 3.1 | Existence and uniqueness of meromorphic solutions . . . | 177 |
| 3.2 | Algebraic complete integrability | 184 |
| 3.3 | The Liouville-Arnold-Adler-van Moerbeke theorem . . . | 191 |
| 3.4 | Euler equations revisited | 195 |
| 3.5 | A five-dimensional system | 198 |
| 3.6 | The Hénon-Heiles system | 222 |
| 3.7 | The Kowalewski top | 240 |
| 3.8 | The Manakov geodesic flow on the group $SO(4)$ | 262 |
| 3.9 | Geodesic flow on $SO(4)$ with a quartic invariant | 271 |
| 3.10 | The geodesic flow on $SO(n)$ for a left invariant metric . . | 277 |
| 3.11 | A family of integrable systems | 281 |
| 3.12 | The periodic 5-particle Kac-van Moerbeke lattice | 291 |
| 3.13 | Generalized periodic Toda systems | 292 |
| 3.14 | The Gross-Neveu system | 294 |
| 3.15 | The Kolosof potential | 295 |
| 4 | Generalized algebraic completely integrable systems | 297 |
| 4.1 | Generalities | 297 |
| 4.2 | A 4-dimensional integrable system in the generalized sense | 303 |
| 4.3 | The Hénon-Heiles and a 5-dimensional system | 319 |
| 4.4 | The RDG potential and a 5-dimensional system | 324 |
| 4.5 | The Goryachev-Chaplygin top and a 7-dimensional system | 330 |
| 4.6 | The Lagrange top | 336 |

| | | |
|----------|---|------------|
| 4.7 | The Yang-Mills system and cyclic covering of Abelian varieties | 338 |
| 5 | KP-KdV hierarchy and pseudo-differential operators | 347 |
| 5.1 | Introduction | 348 |
| 5.2 | Stationary Schrödinger equation and integral Gelfand-Levitan equation | 351 |
| 5.3 | KdV equation and the inverse diffusion method | 366 |
| 5.4 | Pseudo-differential operators and symplectic structures | 385 |
| 5.5 | KdV equation, Heisenberg and Virasoro algebras | 391 |
| 5.6 | KP hierarchy and vertex operators | 396 |
| A | Hamilton-Jacobi theory in the calculus of variations | 411 |
| A.1 | Euler-Lagrange equation | 411 |
| A.2 | Legendre transformation | 415 |
| A.3 | Hamilton's canonical equations | 418 |
| A.4 | Canonical transformation | 420 |
| A.5 | Hamilton-Jacobi equation and applications | 421 |
| B | Elliptic Functions and Elliptic Integrals | 435 |
| B.1 | Elliptic Functions | 435 |
| B.2 | Weierstrass functions | 438 |
| B.3 | Elliptic integrals and Jacobi elliptic functions | 444 |
| B.4 | Application : simple pendulum | 448 |
| C | Riemann surfaces | 453 |
| C.1 | Definitions | 453 |
| C.2 | Properties | 454 |
| D | Abelian varieties | 459 |
| D.1 | Generalities | 459 |
| D.2 | Complex tori and Abelian varieties | 460 |
| D.3 | Normally generated line bundles, dual Abelian varieties | 463 |
| D.4 | Prym varieties | 469 |
| E | Holomorphic differential on Riemann surfaces | 483 |
| E.1 | Adjunction formula and Poincaré residue | 483 |
| E.2 | How to construct holomorphic differential forms | 486 |

| | |
|---|------------|
| F Meromorphic functions and theta functions | 501 |
| F.1 Theta Functions | 501 |
| F.2 Meromorphic functions expressed in terms of theta functions | 504 |
| F.3 Examples | 520 |
| Bibliography | 523 |
| Index | 544 |
